Inside Anchor

Anchor is a leader in many diversified markets with a focus on infrastructure, environmental, energy, water and waste water treatment. Anchor delivers design/design-build, program and project management services. We pride ourselves in our ability to listen to clients and understand their needs.

We work with our clients to determine the most appropriate procurement solution for their project and treat as our highest priority. We make a real difference to citizens and communities in Africa by facilitating positive, lasting change and enabling excellence in service delivery.

Our corporate responsibility is about approaching our business aims with an awareness of the associated social and environmental implications and taking measures to address these in a responsible and sustainable manner.

Our Mission

Anchor aims to produce high quality engineering design in concept, in detail and in execution, on time, to programme and delivering excellent value for money.

To develop innovative, economic and sustainable solutions that successfully meets the needs of our clients, whilst adding value and a better quality of life for all.

Our Vision

We treat our clients and each other with respect. We are honest and say what we mean. We encourage open debate, and if we think someone is making a mistake, we say so, tactfully. We do not play political games. Once a decision is made, we are committed to following through

Our Values

We are thoughtful. We understand the value of experience, but we also question traditional approaches, looking for better, smarter ways to do things. We need to understand and be able to justify the way things are done – the answer ‘we’ve always done it that way’ is not enough.

- Professionalism
- Innovativeness
- High Quality Service
- Integrity
- Flexibility

Committed Technical Experts & Reliable Partner

Consultancy

At Anchor, we drive efficiency at every stage of our projects, constantly striking the right balance between quality and savings. We also focus on providing a flexible, integrated and highly responsive consultancy service that utilises a wide range of skills from across the company in delivering technical excellence. This division provides services from the early stages of project development right up to completion for an expanding base of government and private clients in the region.

Anchor have a wealth of experience in engineering, project management, environmental and engineering design and build projects of all sizes.

Architecture

Anchor have developed specialist expertise across every major development sector and provide our clients with the reassurance of a long-standing track record for successful project delivery and design excellence.

Anchor architecture reflects our knowledge of how people and organisations use and experience place and space. We work collaboratively with clients, communities and end users to create buildings that work well on every level, inside and out. We deliver them across our Africa markets with a consistently high standard of service.

We provide unrivalled specialist know-how in designing state-of-the-art facilities from the initial planning stage through to completion and further add value by our commitment to a sustainable design agenda. Our specialists can improve a building's performance, reduce maintenance and whole life running costs and enhance living experience.

Our services including: -

- Master Planning
- Urban Design
- Landscaping Design
- Interior Design
- Residential & Mix-Use
- Retail
- Hospitality
- Health Care

Engineering & Construction

Anchor provides a multi-disciplinary design and build service to complement our wide range of engineering and construction services. Delivering end-to-end building and civil engineering services across every major sector, our design team incorporates civil, structural, mechanical and electrical engineers. We aim to work in partnership with our clients, tailoring our services to meet their requirements.

From concept to completion, we provide clients with innovative, cost-effective and sustainable solutions that often push the boundaries of engineering design. Our experience in urban development and redevelopment projects ranges from small housing estates, to high-rise apartments working in both the private and public sectors on new build and refurbishment projects.

Our extensive experience and expertise in building projects further enables us to understand our clients' construction needs and deliver solutions that surpass their expectations.

Our Services Including; -

- Civil & Structural
- MEP Services
- Feasibility Studies
